## EVERGREEN SEEDLINGS AND ROOTED CUTTINGS

Suitable for Bedding Out. Strong, Thrifty, Well Graded Stock

The propagation of young Evergreens has been one of our specialties for a great many years. Our soil and climate is especially adapted to their culture. Great care is exercised in selection so that only hardy, dependable types are produced.

We recommend bedding out young Evergreens where they can be shaded and watered for a year or two before planting out in open field rows. Plant in rows about one inch apart and rows about four inches apart, so the soil can be kept loose with a hand weeder.
